**Re: UPRR Segment Soil Sampling Letter Report
Former Pechiney Cast Plate, Inc. Facility
3200 Fruitland Avenue, Vernon, California**

Dear Ms. Santos:

Pursuant to the December 18, 2015 letter from United States Environmental Protection Agency¹ (U.S. EPA), Amec Foster Wheeler Environment & Infrastructure, Inc. (Amec Foster Wheeler) conducted sampling and has prepared this letter report on behalf of Pechiney Cast Plate, Inc. (Pechiney) for the Union Pacific Railroad (UPRR) property located at Railroad Milepost 4.2 - San Pedro Subdivision, Vernon, Los Angeles, California, Folder 3009-75 (the UPRR property or UPRR segment; Figure 1). The work described herein was conducted as required by U.S. EPA for additional characterization of polychlorinated biphenyls (PCBs) that may be present in soil on the UPRR property. Prior to and during demolition at the former Pechiney Cast Plate facility, located at 3200 Fruitland Avenue, Vernon, California (the Pechiney site), total PCBs were detected above the site-specific remediation goal of 3.5 milligrams per kilogram (mg/kg) at three locations (W-1/W-2 and near former storm water outfall 6 at SWO-6-N and SWO-6-S; Amec, 2015²) on the UPRR property as shown on Figure 2. In addition, arsenic was detected above the site-specific remediation goal of 10 mg/kg in two soil samples (W-24 and W-25) as shown on Figure 3. Amec Foster Wheeler completed the work described below.

WORK COMPLETED

The field work completed consisted of soil sampling on the UPRR property, equipment decontamination, laboratory analysis, and managing and characterization of investigation derived waste.

PRE-FIELD ACTIVITIES

Pre-field activities conducted before mobilization to the UPRR property included an update and review of the site-specific health and safety plan (HASP), obtaining access and coordinating

¹ United States Environmental Protection Agency (U.S. EPA) Region IX, 2015, Letter Re: PCB Cleanup Completion at Former Pechiney Cast Plate Facility, December 18.

² Amec Environment & Infrastructure, Inc., 2015, Final Phase III, IV and VI Completion Report, Former Pechiney Cast Plate, Inc. Facility, Vernon, California, September 4.

with UPRR, notification of appropriate agencies, marking field locations, and notifying Underground Services Alert (USA). Each of the pre-field activities is described below.

- The site-specific HASP prepared for the field activities performed by Amec Foster Wheeler personnel and subcontractors was reviewed and updated to address the planned scope of work. The objective of the HASP was to support the safety of the investigative team during field activities.
- Amec Foster Wheeler coordinated with UPRR to obtain an access agreement and have a railroad flag man on site per conditions of the access agreement.
- USA was notified at least 48 hours prior to the start of fieldwork.
- Subcontractors were procured for laboratory analysis (Eurofins Calscience, Inc. of Garden Grove, California) and for waste disposal (American Integrated Services Inc. [AIS] of Wilmington, California).

SOIL SAMPLING AND ANALYSIS

Soil samples were collected on the UPRR right-of-way using a 4-inch stainless steel hand auger. Borings were sampled at depths of 1, 3, and/or 5 feet below ground surface (bgs). Soil was collected from the decontaminated bucket of the hand auger and placed into glass jars. Soil samples collected for analysis were submitted to Eurofins Calscience, Inc. and were analyzed for PCBs by U.S. EPA Method 8082 (using Soxhlet Extraction Method 3540C) and arsenic by U.S. EPA Method 6010B. Sample identification, collection depth, and analytical results are summarized in Table 1.

Soil borings were backfilled with hydrated bentonite chips per conditions of the access agreement.

SAMPLE RESULTS

Soil sample results are summarized in Table 1. Laboratory analytical reports and chain-of-custody forms are provided in Appendix A. A brief summary of soil results is provided below.

PCBs

- PCB Aroclors detected in the soil samples included 1248, 1254, 1260, and 1268 (Table 1). Where detected, Aroclor 1254 was observed at a higher concentration than Aroclor 1248 (UPR-1, UPR-7, UPR-14, UPR-17, UPR-20 and UPR-28). Samples collected previously on the UPRR property during the assessment of former storm water outfall 6 in 1999 (Amec, 2012³), Aroclor 1248 was detected but not

³ Amec Environment & Infrastructure, Inc., 2012, Feasibility Study, Former Pechiney Cast Plate, Inc., Facility, 3200 Fruitland Avenue, Vernon, California, May 7.

1254. Previous assessments and soil removals conducted at the adjacent Pechiney site, also indicated that Aroclor 1248 was the predominant Aroclor (Amec, 2012³).

- Total PCBs were detected in samples UPR-1, UPR-4, UPR-7, UPR-14, UPR-17, UPR-20 and UPR-23 (Figure 2) at concentrations ranging between 0.08 and 194 mg/kg. The highest total PCB concentration was detected at UPR-17 at a depth of 1 foot. PCBs were not detected above the reporting limits in the remaining samples.
- Total PCBs were detected in the soil samples above the site-specific remediation goal of 3.5 mg/kg as follows (see Figure 2):
 - at 1 foot at UPR-7, UPR-14, UPR-17, and UPR-28 (Aroclor 1254 was also above the site-specific remediation goal of 2.0 mg/kg);
 - at 1 to 1.5 feet at previous sample locations W-1/W-2 and W-24/W-25; and
 - at 2 feet at previous sample locations SWO-6-N and SWO-6-S.
- Deeper soil samples collected at depths between 3 and 10 feet were predominantly non-detect with only two locations with total PCBs at concentrations between 0.056 to 0.150 mg/kg.

Arsenic

- Arsenic was detected in all samples with the exception of UPR-2 at concentrations ranging between 0.82 and 123 mg/kg (Table 1). The highest arsenic concentration was detected at UPR-14 at a depth of 1 foot.
- Arsenic was detected in the soil samples above the site-specific remediation goal of 10 mg/kg as follows:
 - at 1 foot at UPR-1, UPR-4, UPR-7, UPR-14, UPR-17, UPR-20, and UPR-28;
 - at 1 and 1.5 feet at previous sample locations W-1/W-2; and
 - at 3 and 5 feet at UPR-10, UPR-15 and UPR-16; UPR-18 and UPR-19; UPR-24 and UPR-25; and UPR-29 and UPR-30. As a note, PCBs were not detected in these deeper samples, suggesting the arsenic impacts are associated with the operation/maintenance of the rail line

Ms. Carmen Santos
U.S. EPA Division 9

Page 4

Summary

Based on the additional soil sampling, the vertical and lateral extent of total PCBs in soil in the UPRR segment has been characterized, with concentrations above the site-specific remediation goal of 3.5 mg/kg in the 1-foot samples and at 2 feet in the vicinity of former storm water outfall 6. In addition, the lateral extent of soil with PCBs above the site-specific remediation goal has been characterized to the north, west (by the rail bed area), and south (to the area that was accessible). The area to the east was characterized during the below grade sampling and soil removal actions for the Pechiney site (Amec, 2015).

Given the detection of arsenic above the site-specific remediation goal of 10 mg/kg at depths of 1, 3 and 5 feet, and the lack of the detection of PCBs in the deeper samples, suggests that the presence of arsenic in soil on the UPRR segment is not derived from the former operations at the Pechiney site or former storm water outfall 6, but may be associated with the operation/maintenance of the rail line.

EQUIPMENT DECONTAMINATION AND INVESTIGATION DERIVED WASTE DISPOSAL

The hand auger and other digging equipment were washed in non-phosphate detergent, double rinsed in potable water, and rinsed with hexane before use in each borehole and/or between samples. Soil cuttings and water generated during the equipment decontamination and sampling activities (IDW) were stored in 55-gallon drums and placed on a secondary containment pallet staged at the Pechiney site. IDW was characterized as non-hazardous waste for disposal. The IDW was transported by AIS for disposal to the appropriate facilities.

QUALITY ASSURANCE/QUALITY CONTROL RESULTS

Amec Foster Wheeler and the analytical laboratory followed specific quality assurance/quality control (QA/QC) procedures to evaluate analytical data generated. These procedures included the collection and analysis of a field equipment blank, and laboratory blank samples, laboratory duplicates, and laboratory spike samples.

Data from the QA/QC samples were evaluated to assess precision, accuracy, completeness, and data usability. The QA/QC review was performed in general accordance with the U.S. EPA National Functional Guidelines⁴ and a summary of the results is provided below. The laboratory reported that the sample shipments were received at temperatures within the acceptable range. The soil and QA/QC samples were analyzed within the method holding times and the requested analyses were performed by the analytical laboratory.

⁴ U.S. EPA, 2016, U.S. EPA National Functional Guidelines for Superfund Organic Methods Data Review, OSWER 9355.0-134, EPA 540-R-2016-002, September.

Blanks

The QA/QC program included the analysis of an equipment blank (QCEB-051617) and laboratory method blanks corresponding to each analytical batch of samples. No analytes were detected in the equipment blank or method blank samples for this event.

Spike Recoveries in Laboratory Control Sample/Laboratory Control Spike Sample (LCS/LCSD)

Spike recoveries (%Rs) were within laboratory control limits in LCS/LCSD samples analyzed by the laboratory for this program.

Spike Recoveries in Matrix Spike/Matrix Spike Duplicate (MS/MSD) Samples

Spike recoveries were evaluated for MS/MSD samples. %Rs were within laboratory control limits in associated MS/MSD samples analyzed by the laboratory for this program with the exception of:

- The MS %R was above the QC limits for arsenic in the QC batch associated with samples UPR-23, UPR-24, UPR-25, UPR-26, UPR-27, UPR-28, UPR-29 and UPR-30. Arsenic was detected above the reporting limit in the associated samples and were therefore qualified with "J+" flags.

Surrogate Recoveries

The surrogate compound recoveries associated with soil samples for this program were within laboratory control limits with the exception of:

- Surrogate decachlorobiphenyl recovery associated with sample UPR-17 for Aroclor-1254 was above the QC limit. Aroclor-1254 was detected above the reporting limit in sample UPR-17 and qualified with a "J+" flag.
- Surrogate decachlorobiphenyl recovery associated with sample UPR-28 for PCB (1248, 1254, and 1260) analysis was above the QC limit. Aroclors that were detected above the reporting limit in sample UPR-28 were qualified with a "J+" flags. Non-detected PCB results were not qualified.
- Surrogate 2,4,5,6-tetrachloro-m-xylene recovery associated with sample UPR-14 for Aroclor-1254 analysis was above the QC limit. Aroclor-1254 was detected above reporting limit in the UPR-14. The Aroclor-1254 result for UPR-14 was qualified with a J+ flag.

Ms. Carmen Santos
U.S. EPA Division 9
October 27, 2017
Page 6

Laboratory Duplicates

The RPDs for the LCS/LCSD and MS/MSD pairs associated with soil samples for this program were within laboratory control limits.

In summary, the field and laboratory quality control results indicate that the sampling and analyses performed for this project were generally consistent with the analytical methods and provided data suitable for project objectives. Overall, the data generated are acceptable and suitable for decision-making purposes.

CONCLUSIONS

Based on the past detections of PCBs in soil near storm water outfall 6, PCBs detected in soil along the UPRR segment sampled during this investigation appear to be related to the former site operations.

Based on the distribution of arsenic in soil, the occurrence of arsenic in soil along the UPRR segment sampled during this investigation appears to be related to railroad operation/maintenance, rather than from former operations at the Pechiney site or the former storm water outfall 6.

If you have any questions or need any additional information, please call either of the undersigned at (949) 642-0245.

Work Order Narrative

Work Order: 17-06-1195

Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 06/15/17. They were assigned to Work Order 17-06-1195.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Glossary of Terms and Qualifiers

Work Order: 17-06-1195

Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Subject: Hold samples for pechiney

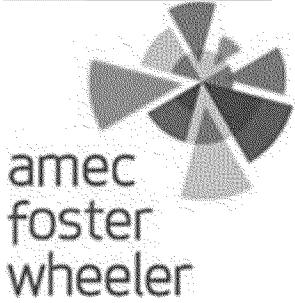

Hi Steve,

Per our conversation, please hold samples UPR-11 and UPR-13.

Thank you,

Cameron Dobbs
